

Project Report: Deliverable D0

Course: Dcit 208

Date: June 24, 2026

Team Name: TechCare Team

Project Title: PluseCare

A. TEAM IDENTITY

1. Team Information

Team name: TechCare Team

Project Title: PluseCare

Project tagline: Connecting patients to better care

2. Team Members

3. Member Biographies

CINY NKRUMAH QUAINOO (Product manager)

Cindy Nkrumah Quainoo is a Level 200 student at the University of Ghana, Legon, pursuing a degree in Computer Science and Mathematics. She has a strong interest in analytical thinking, computational problem-solving, and the application of technology to address real-world challenges. She is particularly fascinated by the relationship between mathematics and computer science and how these disciplines can be used to drive innovation, improve decision-making, and create impactful solutions.

For Cindy, undertaking this project presents a valuable opportunity to apply classroom knowledge in a practical setting while gaining hands-on experience in solving real client needs. The project will not only strengthen her technical and teamwork skills but also equip her with the professional mindset, confidence, and practical experience needed to thrive in the technology industry and the broader professional world.

ROBERT AIDOO KWABENA(UX lead)

Robert Kwabena Aidoo is a Computer Science student at the University of Ghana with a strong interest in software and web application development. He is a member of the project team responsible for the design and development of digital solutions tailored to client needs. With a solid foundation in computing and problem-solving, Robert is committed to developing reliable, user-friendly, and efficient web applications. He approaches every project with professionalism, attention to detail, and a focus on delivering solutions that meet client expectations.

FELIX AKWASI AGYEI (Evidence lead)

Felix Akwasi AGYEI is a dedicated Computer Science and Mathematics student at the University of Ghana with a strong interest in software development, algorithms, data structures, and modern web technologies. He is passionate about leveraging technology to solve complex problems and create practical solutions that improve efficiency and user experience. Through academic studies and hands-on projects, Felix continues to strengthen his expertise in programming, database systems, and software engineering. He aspires to build innovative, scalable software systems and contribute meaningfully to the advancement of technology as a professional software engineer.

ANKARA LIGHT KWASI (DevOps leads)

Ankrah Light Kwasi is a Level 200 student at the University of Ghana, currently building a strong foundation in software engineering. With a passion for crafting efficient and user-friendly

solutions, he is steadily honing his skills in coding, system design, and problem-solving. Beyond the screen, Light brings the same energy and teamwork to the football pitch, where he enjoys both the thrill of the game and the camaraderie it fosters. Driven by a vision to merge technology with real-world impact, he is committed to becoming a versatile engineer who builds tools that matter.

Osei Evans (Architecture and context leads)

Evans Osei is a Computer Science and Mathematics student at the University of Ghana. He is interested in software development, algorithms, data structures, and web technologies. He enjoys solving computational problems and working collaboratively on technology projects. Evans is developing skills in programming, database systems, and software engineering. He is passionate about building practical solutions that improve efficiency and user experience. His long-term goal is to become a software engineer capable of developing scalable and impactful software systems.

Samuella Nhyira Nyarko (Implementation lead)

Samuella Nhyira Nyarko is currently pursuing a degree in Statistics with Computer Science. She has a keen interest in software and web application development and enjoys applying both statistical and computational techniques to solve real-world problems. She is passionate about tackling mathematical and analytical challenges and values collaboration, particularly when working with fellow students on projects and research-oriented tasks.

Samuella is continuously developing her programming skills and expanding her knowledge of modern technologies. Through projects such as this, she aims to gain practical experience in designing and delivering effective solutions that address the everyday needs and challenges of clients while preparing herself for a successful career in the technology field.

Temiloluwa Dorcas Eboetse (Quality Assurance lead)

Temiloluwa Dorcas Eboetse is a level 200 student at University of Ghana, Legon currently pursuing a degree in BSc. Information Technology. She has a genuine passion for problem solving using software development and web technologies and aspires to create digital solutions to make everyday life easier.

She is a gifted mathematician and is currently working on improving her programming skills. Working on this project, to her, provides perfect experience with solving the clients problems with digital solutions in real time.

4. Team Photo

5. Team Contact

The team shall appoint a primary contact person who will serve as the main communication link between the team, the client and the lecturer. A deputy contact person shall also be appointed to act in the absence of primary contact.

B. TEAM OPERATING AGREEMENT

1. Communication and collaboration

The team will use WhatsApp as a primary communication platform. Members are expected to respond to messages with 24 hours and inform the team in advance if they are not available

2. Meeting Schedule

Day	Time	Platform
Monday	9:30 AM	Physical meeting
Saturday	4:00 PM	WhatsApp

Attendance Rule

- Members must attend at least 80% of meetings

3. Decision Making

Team decisions shall be made through discussion and majority agreement. Important decisions and action items shall be recorded and shared with all members.

4. Work Assignment Process

Project tasks shall be assigned according to members skills and availability. Completed task shall be reviewed by at least one other team member before being accepted as final

C. CLIENT AND PROBLEM INTAKE

1. INTENDED CLIENT

Client Name: DR. Awuku Samuel

Organization: Akuapem North Community Health Center

Contact Person: Dr. Awuku Samuel

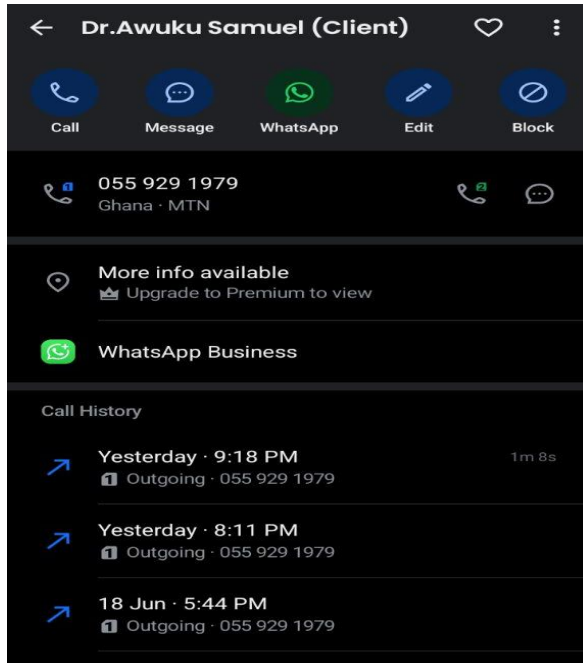

Phone/Email: +233 55 9291979

2. Initial Problem Statement

The client currently manages the hospital at Akuapem North Community Health Center and runs a pharmacy, but his main concern is the pharmacy. The hospital and the pharmacy have been established at two different places so our client wants to introduce a new system in the pharmacy where patients who need or are interested in their wellbeing and would like to reach out to a health personnel for advice but wouldn't like to visit the hospital and join long queues for just a minor problem can reach out to him or the health personnel either at the hospital or the pharmacy through a phone call or a text message. Also, in this same system patients will have the chance to order basic drugs in the comfort of their homes and drugs that will need receipts before they can be processed the system will tell the patients to upload a photo for confirmation which is going to be taken later after the drug has been delivered. In order to also solve the problem of patient who want health advice but don't want to visit the hospital, the system will also contain two phone lines one which connects it to the hospital and the other to the pharmacy and patient will have to pay for consultation fee before they get the chance to talk to the doctor. Equal attention and much time will be given to patients on the phone call. Since patients will be charged for consultation fees the system will also contain a payment

system which will be displayed when the patient applies for the consultation. Hence, we are building a webapp for our client which is going to fulfil all the clients' requirements and also contains all the services that is being run at both the hospital and pharmacy.

3. Evidence of First Contact

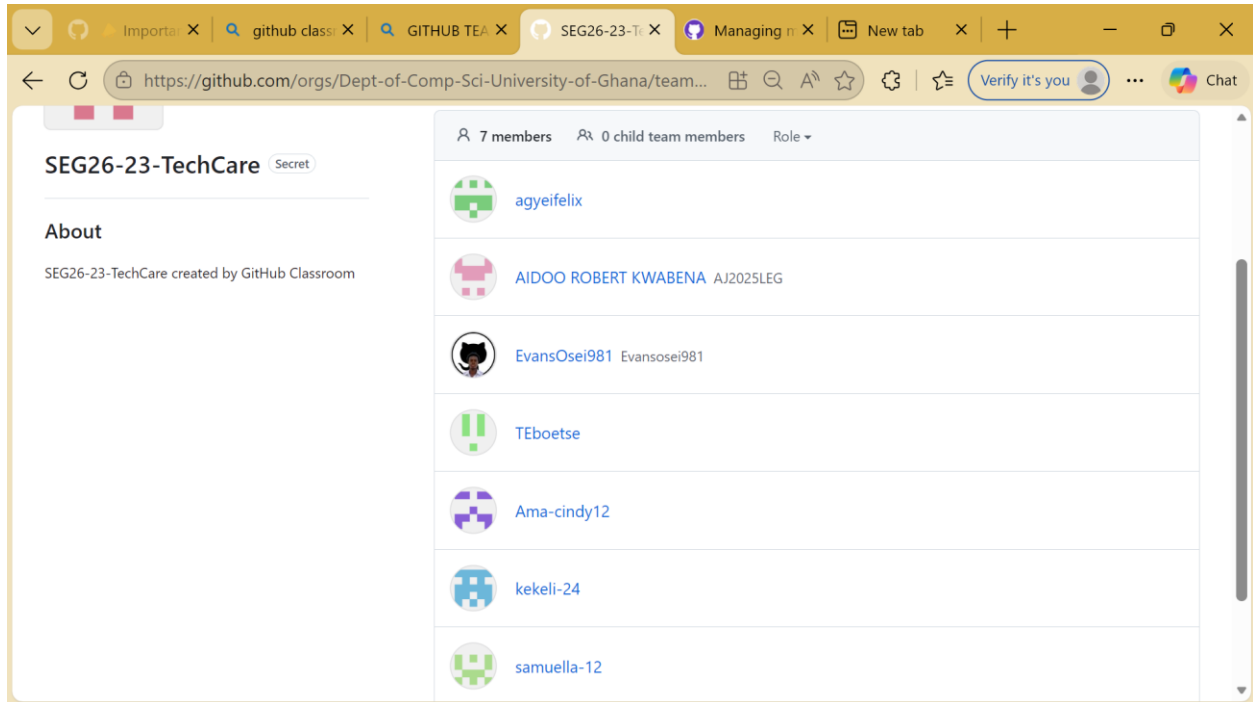

Evidence of communication with client

4. User Groups

User Group	Purpose
Administrator	Manage system
Staff	Update records
Patients	Access service

5. Fallback plans

2. Repository Access

3. Repository Structure

The repository shall contain all required files and folder, including README.md, TEAM.md, AI_USAGE.md, documentation folder, presentation material, and source code directories.

4. YouTube Channel

Channel Name: PluseCare

Channel URL: <https://youtube.com/@plusecare?si=muEhWVWjVRsKp3R3>

5. Sakai Submission Contact

Name: Evans Osei

Email: eosei480@st.ug.edu.gh

E. AI CONTRACT

AI Usage Acknowledgment

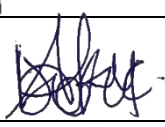

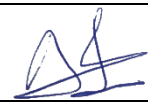

We, the undersigned, hereby agree that while AI tools may assist in brainstorming, drafting, and debugging, they will not replace our core understanding of the software engineering process.

We will log all AI usage in the AI_USAGE.md file.

We will not share confidential client data with public AI tools.

Every team member takes full responsibility for explaining the code they submit. If a member cannot explain their work, they agree to receive zero credit.
